

PEPPER FLOW RELEASE NOTES

2018.07

PURPOSE

The Release Notes provide a high-level description of the latest information about new features, enhancements to existing features and fixed issues.

They also include adoption and support information to help get you started with your upgrade.

Vodori provides a functional, validated update to Pepper Cloud 4 times per year. Customers are required to update to the latest available version within 90 days of the release.

TABLE OF CONTENTS

What's new?	4
Fixed Issues	5
Support	6

WHAT'S NEW?

OPT-IN

Customers can elect to use these features. Requirements gathering and configuration may incur additional cost.

- Added Active Directory support for user accounts for both authentication and esignature.
- Added a new role granting a user the ability to participate in any job without having been selected as a collaborator.

OUT-OF-THE-BOX

These are standard features of Pepper Flow that work immediately with no configuration.

Supporting Documents

- Supporting documents have been introduced to enhance the functionality and usability of reference linking.
- Supporting documents can be added to a job at any time prior to a job completing.
- A user may upload a supporting file directly to a job without requiring an additional workflow.

Annotations

- Users may comment on any job they have permission to view, prior to the job completing.
- Ability to collaborate with others through @user mentions. Mentions notify the selected user to follow-up in a comment feed.
- When creating a reference point, highlighted text will automatically populate into the text box.

Audit Trail

- Added new audit trail entries to capture supporting document activities.
- The history of changes made to a comment is now captured in the Audit Trail.

Real-Time Updates

- While viewing a document, a user is shown which other users are also viewing the same version and job.
- Changes made by other users such as casting votes or adding comments now display within the viewer without requiring a refresh of the browser.

Administrative

- Added ability for Vodori administrators to regenerate thumbnails.
- Added ability for Vodori administrators to import and export configuration files across environments.

Other

- Revised message styling, Bright red caution icon increases emphasis of the error
Consistent colors across all error messaging:
Red - error
Yellow - alert
Blue - information
Green - successful
- An unsupported browser message notifies users if using a browser other than Chrome.
- A document details report capturing metadata values is available on the Insights tab to all users.

FIXED ISSUES

Includes bugs and maintenance

Feature	Issue	Resolution
Viewer	Differences in display between an automatic PDF rendition and the uploaded MS Office file.	Added ability for Vodori administrators to upload a rendition of a file for display in the viewer.
Fonts	Limited font support contributing to display discrepancies for some MS Office files.	Created mechanism for Vodori administrators to add additional fonts for use by the thumbnailer. Added commonly used fonts to the existing set of fonts.
Form fields	Values pasted into form fields failing to save.	Values in form fields save regardless of how they were input.
Filters	Poor text wrapping causing long filter names to be difficult to read.	Improved text wrapping to accommodate longer filter names.
